Commentary

JS Government Securities Fund ('JSGSF' or the 'Fund') is a low-risk profile open-end income Fund, designed to preserve investors' capital while offering a regular stream of income—targeting returns higher than those typically provided by commercial bank deposits of similar liquidity. The Fund maintains a diversified portfolio comprising high-quality, investment-grade instruments, with a primary focus on government securities and money market instruments. This strategy aims to strike a balance between stability, liquidity, and consistent income generation. As of December 2024, the Fund reported Assets Under Management (AUM) of PKR 9,123 million. In terms of asset allocation, approximately 56% of the portfolio was invested in Treasury Bills (T-Bills), 41% in Pakistan Investment Bonds (PIBs), with the remaining portion allocated to other approved instruments. From a credit quality standpoint, the Fund demonstrated a strong risk-averse stance, with nearly 99% of investments in Government Securities and AAA rated instruments, and the remainder in AA+ rated avenues. As of the reporting period, the Fund's Weighted Average Maturity (WAM) stood at 759 days, indicating exposure to elevated credit rate risk, while the duration measured at 157 days, reflecting a moderate sensitivity to interest rate fluctuations. This positioning makes JSGSF a compelling choice for conservative investors seeking capital preservation along with stable, tax-efficient income. Going forward, any material changes in the investment policy or the devised rating criteria for the assigned rating would have an impact on rating.

Stability Ratings Explained

The Stability rating is based on a detailed quantitative assessment of fund's portfolio and qualitative assessment of fund management. It provides the investors with an objective measure as to the main areas of risk to which the income funds are exposed, which is credit risk, liquidity risk and interest rate risk.

Credit Risk

- The foremost factor is credit risk, having the highest weight in the rating matrix. The opinion is based on review of various factors, including the fund's investment policies regarding credit risk exposure towards various market segments, individual and cumulative credit quality of the investment portfolio, the diversification of assets across investment types and issuers, and weighted average maturity.

Market Risk

- The more complex part of evaluating a fund's stability involves determining the fund's sensitivity to the changing market conditions. PACRA assess market risk in the nexus of variables affecting the market value of the underlying portfolio. Market value can fluctuate due to a number of variables largely including interest rate, liquidity and operating environment.

Liquidity Risk

- The liquidity of a security refers to the speed at which that security can be sold for approximately the price at which the fund has it valued. Securities which are less liquid are subject to greater price variability. While analyzing the liquidity of investment portfolio, PACRA considers the types of investments in the portfolio, the maturity structure, and secondary market liquidity.

Historical Returns Volatility

- Funds having operational history of six-months or more, the variability in returns is gauged on standardized basis through coefficient of variation for each fund in a category. The coefficient of variation is calculated by dividing standard deviation of fund's monthly returns by average monthly return (SD of Monthly Returns/Average Monthly Return).

Asset Manager

- Management scoring is derived from the asset manager rating of the company managing the fund. PACRA reviews the policies and procedures developed by the management to meet its investment objectives. Therefore, an assessment of the fund manager's qualification and experience, asset management company's capabilities and track record are an integral part to the fund rating process.

FUND STABILITY RATING SCALE	
Symbols	Definitions
AAA(f)	An exceptionally strong capacity to maintain relative stability in returns and possesses negligible exposure to risks.
AA+(f) AA(f) AA-(f)	A very strong capacity to maintain relative stability in returns and possesses low exposure to risks. This capacity may, nevertheless, be more vulnerable to changes in circumstances or in economic conditions.
A+(f) A(f) A-(f)	A fund with stable performance generally in line with its peers with strong capacity to respond to future opportunities or stress situations.
BBB+(f) BBB(f) BBB-(f)	An adequate capacity to maintain relative stability in returns and possesses high exposure to risks. This capacity may be impacted adversely by changes in circumstances or in economic conditions.
BB+(f) BB(f) BB-(f)	A low capacity to maintain stability in returns and possesses very high exposure to risks.
B(f)	A very low capacity to maintain stability in returns and possesses very high exposure to risks.
The fund stability rating scale of AAA to B is appended by the letter (f) to denote fund ratings and to differentiate it from the nomenclature used for issue and issuer ratings	

Rating Watch
Alerts to the possibility of a rating change subsequent to, or in anticipation of some material identifiable event. But it does not mean that a rating change is inevitable. A watch should be resolved within foreseeable future, but may continue if underlying circumstances are not settled.
Rating Outlooks
Indicates the potential and direction of a rating in response to a) trends in economic and/or fundamental business/financial conditions and/or deviation from expected trend. It is not necessarily a precursor to a rating change. 'Stable' outlook means a rating is not likely to change. 'Positive' means it may be raised. 'Negative' means it may be lowered. Where the trends have conflicting elements, the outlook may be described as 'Developing'.
