Rating Rationale and Key Rating Drivers

SPI is classified as an emerging company wherein which the company is building a diversified insurance portfolio. In the recent period the growth has been muted due to multiple factors specially the slowdown in the economic environment of the country. Given the prevailing challenges on account of COVID-19, the future growth pattern is also expected to be slightly uneven. The organization takes benefit from synergistic approach at group level - United International Group (UIG) - and replicate the group's established practices. The company is actively engaged in co-insurance both at group level and independently. The loss ratio is in acceptable range. The contribution from alternative income stream – investment book – is small; needs to improve. The company booked a revaluation gain on its investment in Apna Micro Finance Bank. The liquidity is adequate considering the claims outstanding. However, the receivables are sizable in quantum, management needs to pay attention. The experienced board members provide comfort to the corporate governance structure.

The rating watch captures the challenges with regards to the company's growth and its intention to build liquidity. At the same time, the level of liquidity must improve. The increase in GPW should reflect in improved profitability especially during challenging economic scenario.
