#### Commentary

Alfalsh GHP Sovereign Fund ("AGSOF" or "the Fund") is classified under a medium risk profile. As of June 2025, the Fund reported Assets Under Management (AUM) of PKR 3.98 billion, declining from PKR 12.50 billion in March 2025. The reduction in AUM largely reflects partial redemptions by institutional investors, amid a broader shift toward shorter-duration funds as market participants continue to anticipate a measured easing cycle. In terms of asset allocation, 48.6% of the portfolio was invested in Pakistan Investment Bonds (PIBs), 19.2% in cash placements, 18.2% in government-backed/guaranteed debt securities, and 3.2% in others including receivables. This mix highlights a strategic tilt toward longer-duration sovereign instruments, balanced by sufficient liquidity buffers. From a credit quality standpoint, 96.6% of assets were invested in Government or AAA-rated instruments, underscoring the Fund's strong credit profile and near-sovereign exposure. The Fund maintained a Weighted Average Maturity (WAM) of 1,409 days as of June 2025, indicating a significantly extended duration relative to peers. The higher exposure in PIBs positions the Fund to capture potential capital gains in case of an eventual rate reversal; however, it concurrently exposes the portfolio to mark-to-market sensitivity should the prevailing policy rate of 11% remain intact for a prolonged period. During FY25, the Fund generated an annualized return of 17.6% with a standard deviation of 0.8%, reflecting stable performance in line with its duration-driven strategy and underlying sovereign exposure. **Going forward, any material changes in the investment policy and/or compliance with the rating criteria for the assigned rating would have an impact on the ratings.**

# Stability Ratings Explained

The Stability rating is based on a detailed quantitative assessment of fund's portfolio and qualitative assessment of fund management. It provides the investors with an objective measure as to the main areas of risk to which the income funds are exposed, which is credit risk, liquidity risk and interest rate risk.

## Credit Risk

- The foremost factor is credit risk, having the highest weight in the rating matrix. The opinion is based on review of various factors, including the fund's investment policies regarding credit risk exposure towards various market segments, individual and cumulative credit quality of the investment portfolio, the diversification of assets across investment types and issuers, and weighted average maturity.

## Market Risk

- The more complex part of evaluating a fund's stability involves determining the fund's sensitivity to the changing market conditions. PACRA assess market risk in the nexus of variables affecting the market value of the underlying portfolio. Market value can fluctuate due to a number of variables largely including interest rate, liquidity and operating environment.

## Liquidity Risk

- The liquidity of a security refers to the speed at which that security can be sold for approximately the price at which the fund has it valued. Securities which are less liquid are subject to greater price variability. While analyzing the liquidity of investment portfolio, PACRA considers the types of investments in the portfolio, the maturity structure, and secondary market liquidity.

## Historical Returns Volatility

- Funds having operational history of six-months or more, the variability in returns is gauged on standardized basis through coefficient of variation for each fund in a category. The coefficient of variation is calculated by dividing standard deviation of fund's monthly returns by average monthly return (SD of Monthly Returns/Average Monthly Return).

## Asset Manager

- Management scoring is derived from the asset manager rating of the company managing the fund. PACRA reviews the policies and procedures developed by the management to meet its investment objectives. Therefore, an assessment of the fund manager's qualification and experience, asset management company's capabilities and track record are an integral part to the fund rating process.

| FUND STABILITY RATING SCALE  |  |
|--|--|
| Symbols  | Definitions  |
| AAA(f)   | An exceptionally strong capacity to maintain relative stability in returns and possesses negligible exposure to risks.   |
| AA+(f)<br>AA(f)<br>AA-(f)  | A very strong capacity to maintain relative stability in returns and possesses low exposure to risks. This capacity may, nevertheless, be more vulnerable to changes in circumstances or in economic conditions. |
| A+(f)<br>A(f)<br>A-(f)   | A fund with stable performance generally in line with its peers with strong capacity to respond to future opportunities or stress situations.  |
| BBB+(f)<br>BBB(f)<br>BBB-(f)   | An adequate capacity to maintain relative stability in returns and possesses high exposure to risks. This capacity may be impacted adversely by changes in circumstances or in economic conditions.              |
| BB+(f)<br>BB(f)<br>BB-(f)  | A low capacity to maintain stability in returns and possesses very high exposure to risks.   |
| B(f)   | A very low capacity to maintain stability in returns and possesses very high exposure to risks.  |
| The fund stability rating scale of AAA to B is appended by the letter (f) to denote fund ratings and to differentiate it from the nomenclature used for issue and issuer ratings |  |

| Rating Watch  |
|---|
| Alerts to the possibility of a rating change subsequent to, or in anticipation of some material identifiable event. But it does not mean that a rating change is inevitable. A watch should be resolved within foreseeable future, but may continue if underlying circumstances are not settled.  |
| Rating Outlooks   |
| Indicates the potential and direction of a rating in response to a) trends in economic and/or fundamental business/financial conditions and/or deviation from expected trend. It is not necessarily a precursor to a rating change. 'Stable' outlook means a rating is not likely to change. 'Positive' means it may be raised. 'Negative' means it may be lowered. Where the trends have conflicting elements, the outlook may be described as 'Developing'. |
